

The application is a shopping mall website called **FontDale** that was developed using HTML, CSS, and JavaScript. The website consists of five main pages: **Home Page, Directory Page, Events Page, About Us Page, and Newsletter Page**. Each page was designed to provide visitors with an attractive and user-friendly experience while exploring the mall's facilities, stores, events, and services.

- The **Home Page** serves as the main landing page of the website. This page introduces FontDale through its tagline, **"Where Luxury Meets Lifestyle,"** which represents the mall's commitment to providing a premium shopping and lifestyle experience. The page features highlighted stores and shopping destinations available within the mall, complete with images and descriptions. Visitors can also learn about FontDale's unique atmosphere through a brief introduction and easily navigate to other sections of the website. In addition, interactive visual elements such as hover effects and automatic featured-store displays enhance the overall user experience.
- The **Directory Page** provides a complete directory of stores available at FontDale. Every store entry includes an image, store name, category, and short description to help visitors quickly find the information they need. Stores are organized into several categories such as Fashion, Dining, Beauty, and Technology. Users can filter stores based on these categories, making the browsing experience more efficient and user-friendly. The directory showcases a variety of well-known brands and destinations located within the mall.
- The **Events Page** was created to display upcoming events and activities hosted at FontDale. This page contains a featured-events slider that automatically rotates through highlighted events, allowing visitors to discover the latest attractions. The page also includes a timeline of upcoming activities and an event calendar that helps users view scheduled events in an organized manner. Examples of featured events include Fashion Week showcases, Food Festivals, Beauty Expos, and Technology Exhibitions. These features encourage visitors to stay informed about activities happening within the mall.
- The **About Us Page** provides more detailed information about FontDale as a modern lifestyle and shopping destination. This page explains the mall's vision, mission, history, and core values. Visitors can learn about FontDale's commitment to delivering luxury, innovation, and community engagement through exceptional shopping and entertainment experiences. The page also includes a statistics section highlighting key achievements such as annual visitors, partnered brands, and hosted events. In addition,

several images and interactive sections are included to make the page visually appealing and engaging.

- The **Newsletter Page** provides an interactive registration form that allows visitors to subscribe to FontDale's newsletter service. Users are required to enter personal information including their full name, email address, and phone number. The page also allows users to select multiple interests such as Fashion, Beauty, Dining, Technology, and Entertainment through interactive buttons that change appearance when selected. Furthermore, users can choose their preferred mall section, including North Gallery, South Pavilion, or Lumen Skywalk, as well as their preferred newsletter frequency, such as Weekly, Biweekly, or Monthly. Unlike a simple registration form, the Newsletter Page incorporates several interactive elements and JavaScript functionalities. The selected interests are visually highlighted to improve user interaction, while radio-button groups ensure that only one preferred section and one newsletter frequency can be chosen at a time. JavaScript validation is implemented to ensure that all required information is entered correctly before submission. The validations include checking whether the full name, email address, and phone number fields are completed, verifying that at least one interest has been selected, ensuring that a preferred mall section is chosen, and confirming that a newsletter frequency has been specified. Additionally, the form provides immediate feedback to users through validation messages and a success notification popup after successful registration. Once the form has been submitted successfully, all form fields are automatically reset to their default state. These interactive features help improve usability and create a more engaging user experience.

Overall, the FontDale website was developed to provide visitors with a modern, interactive, and informative digital experience. The combination of responsive design, attractive visual elements, detailed mall information, and JavaScript-powered functionality helps improve usability, accessibility, and visitor satisfaction while promoting FontDale as a premier lifestyle and shopping destination.
